

Commonly Used Patch Panels for Network Cabling

Overview

These Lan patch panel is designed and manufactured according to different transmission rates, providing excellent performance for high speed LANs. At present, the most commonly used types on the market are Category 5e, 6, and 6A patch panels. Patch panels are one of the best ways to manage an expansive local area network (LAN) by providing quick and easy access to the ports and connections that connect them altogether. They come in a range of sizes, and are typically mountable, whether that's on a wall, or on a rack to make for easier. Patch Panels are a standard rack panel punched with ports for network connectors featuring ID strips/labels to help with identification. Many network patch panels are an adaptable choice for 19 inch racks or server enclosures, giving you seamless control of connections, and allowing users to add or.
