

Do I only need to buy a router if I have fiber optic internet

Article Overview

Yes, you need a router to share your fiber optic internet connection with multiple devices, but you don't need a special router—just one that supports your internet speed and Wi-Fi needs.

Fiber Internet Setup

Fiber optic internet does not require a traditional modem. Instead, it uses an Optical Network Terminal (ONT), which converts the fiber optic signal into a digital signal that your devices can use . The ONT connects directly to a router, which then distributes the internet to your devices via Wi-Fi or Ethernet .

Using an ISP-Provided Router

Most fiber ISPs provide a compatible router as part of the installation package . This router is usually sufficient for basic internet use, such as browsing, streaming, and connecting a few devices. It also comes with technical support and easy setup, making it convenient for small homes or apartments .

When to Consider Buying Your Own Router

You might want to purchase a third-party router if you:

- Have a large home or multiple floors and need stronger Wi-Fi coverage...
