

Fiber Channel Card Number

Article Overview

A Fibre Channel card can be identified by its manufacturer part number, such as Cisco's CIVS-FC-1P, and each port on the card has a unique WWPN (World Wide Port Name).

Part Number of Fibre Channel Cards

Fibre Channel cards, also known as FC adapters or HBAs (Host Bus Adapters), are hardware components that enable servers to connect directly to storage arrays over a Fibre Channel network. Each card is assigned a manufacturer-specific part number for identification and ordering purposes. For example, Cisco's Multiservices Platform Series offers a Fibre Channel card with the part number CIVS-FC-1P . Supermicro and other vendors also provide Fibre Channel cards with distinct part numbers for their networking adapters . These part numbers are used to ensure compatibility with specific server models and SAN configurations.

Unique Port Identifiers (WWPN)

Each Fibre Channel port on a card has a World Wide Port Name (WWPN), which is a globally unique identifier assigned by the card manufacturer. The WWPN is used to identify the port in SAN management, zoning, and LUN mapping. For example, a QLogic FC card may have ports with WWPNs like 2000000e1ec95100 and 2000000e1ec95101 . These identifiers are critical for configuring SAN access, monitoring link status, and troubleshooting connectivity issues.
