

Fiber optic patch cord interface types lc and sc

Overview

Most SFP fiber optic modules use LC connectors, while SC connectors are mainly found in legacy networks and MPO/MTP connectors are used for high-density cabling rather than directly on standard SFP modules. Here is a plain-language breakdown of the four main connector types, the specs that actually matter, and how to match a cable to your equipment without guesswork. They bridge the gap. Among the most widely used connectors are SC (Subscriber Connector) and LC (Lucent Connector) patch cords—two designs that, while serving the same core purpose, differ significantly in size, performance, and application. This connector landscape reflects how modern SFP deployments prioritize port density and. Answer first: select ST, SC, FC, LC, MPO/MTP, or another connector from the equipment interface, ferrule, fiber type, polish, polarity, density, insertion-loss and reflectance budget, handling, inspection, cleaning, and lifecycle—not popularity alone.
