

H3C Core Switch Port Description

Article Overview

H3C core switches feature a variety of ports including RJ45, SFP/SFP+, and QSFP+ interfaces, supporting access, trunk, and hybrid modes for flexible network deployment.

Physical Port Types

H3C core switches typically include multiple physical interface types to accommodate different network requirements:

- **RJ45 Ports:** Standard copper Ethernet ports for 10/100/1000 Mbps connections, commonly used for access-layer devices like PCs and printers .
- **SFP/SFP+ Ports:** Small Form-factor Pluggable ports supporting 1G or 10G uplinks, allowing flexible fiber or copper connections for aggregation or uplink purposes .
- **SFP28 Ports:** High-speed 25G ports for modern data center environments, providing higher bandwidth for server or switch interconnections .
- **QSFP+/QSFP28 Ports:** High-density 40G or 100G ports for spine-leaf or core network fabrics, ideal for high-throughput backbone links . Some H3C switches also support combo ports, which allow either copper or fiber connections on the same interface, and PoE-enabled ports to supply power to connected devices like IP phones or access points .

Port Modes and VLAN Configuration

H3C core switch ports can operate in different Layer 2 modes:...
