

How much does it cost to process Russian mesh cable trays

Article Overview

The cost to process wire mesh cable trays depends on material, finish, labor, and production method, typically ranging from \$20 to \$100 per meter for standard trays, with additional costs for complex connectors and surface treatments.

Material and Finish Costs

Wire mesh cable trays are commonly made from pre-galvanized steel, hot-dip galvanized steel, aluminum, or stainless steel. Pre-galvanized steel is the most affordable, suitable for indoor dry environments, while hot-dip galvanized steel is more expensive due to its thick zinc coating, ideal for outdoor or industrial use. Aluminum is lightweight but costly, and stainless steel is the highest-priced option, used in corrosive or hygienic environments. Electro-zinc coated trays are also available for moderate corrosion resistance.

Production and Processing Costs

Processing involves cutting, bending, welding, and surface treatment. Automated machines like cable tray roll formers can produce trays efficiently, reducing labor costs. Manual or semi-automatic production increases labor expenses. Complex connectors such as elbows, tees, and reducers add to the cost due to additional cutting and welding. Surface treatments like hot-dip galvanizing, powder coating, or electrostatic spraying further increase processing costs but enhance durability
