

How much is a German electrical distribution box worth

Article Overview

In Germany, electrical distribution boxes typically range from €50 for basic residential units to over €1,000 for industrial or smart, modular systems.

Price Ranges

- Residential distribution boxes: Basic single-phase units for homes usually cost €50–€200, depending on the number of circuits, amperage, and IP protection class .
- Commercial units: Medium-capacity boxes for offices or small businesses range from €200–€500, often including additional safety features, modularity, and aesthetic integration .
- Industrial distribution boxes: Heavy-duty three-phase systems for factories or construction sites can exceed €500–€1,500, especially when designed for high currents, automation integration, or harsh environments .

Factors Affecting Cost

- Amperage and circuit count: Higher current capacity and more circuits increase the price.
- Material and protection class: Weather-resistant or impact-resistant enclosures (IP65 or higher) cost more than standard indoor-rated boxes .
- Technological features: Smart monitoring, remote control, and digital displays add to the cost .
- Customization: Special mounting configurations, labeling, or integration with building management systems can significantly raise prices
