

How to connect a router with dual network and dual fiber optic connections

Article Overview

To connect a router with dual network and dual fiber optic connections, use dual WAN ports with load balancing or failover enabled, connecting each fiber modem to a separate WAN port and configuring the router for combined or redundant internet access.

Step 1: Verify Router Capabilities

Ensure your router supports dual WAN or link aggregation. Check the specifications for features like load balancing, failover, or dual WAN mode. Update the router firmware to the latest version to ensure compatibility and stability .

Step 2: Physical Connections

- Connect each fiber optic modem or ONT to a separate WAN port on the router using Ethernet cables .
- If your router has multiple LAN ports, connect your internal network devices or a network switch to the LAN ports.
- Ensure each WAN interface is enabled and assigned either a static IP or configured for dynamic IP as provided by your ISPs .

Step 3: Router Configuration

- Access the router's web interface via its IP address (commonly 192.168.1.1 or 192.168.0.1), .
- Navigate to the Dual WAN, Load Balancing, or Link Aggregation section....
