

# Installation Standards for Local Area Network Distribution Boxes

## Article Overview

LAN distribution boxes should be installed in dry, accessible, and ventilated locations, with proper grounding, cable management, and compliance with IEC/NEC standards.

### Site Selection and Placement

- **Location:** Install the distribution box close to the main power source to minimize power loss and ensure safety, avoiding humid, corrosive, or poorly ventilated areas to prevent overheating and equipment damage .
- **Height:** The bottom edge is typically 1.5–1.8 meters above the floor, allowing convenient operation and inspection .
- **Accessibility:** Ensure the box is easily reachable for maintenance and future upgrades, and avoid obstructed or confined spaces.

### Enclosure and Protection

- **Material:** Choose steel for durability in industrial environments or plastic for indoor setups .
- **IP/NEMA Ratings:** Select an enclosure with appropriate Ingress Protection (IP) or NEMA rating to protect against dust, water, and mechanical damage .
- **Sealing:** Ensure all cable inlets and cover joints are properly sealed to maintain environmental protection .

### Mounting and Fixing...

## Article Content

Area distribution boxes with connectors

Area boxes can be installed in technical flooring or in false ceilings. Area boxes are offered in Cat. 5e, Cat. 6, Cat 6A, and should be
