

Installation of CFP2800G in Pakistan

Article Overview

The CFP2800G fire alarm panel can be installed in Pakistan by following LPCB-approved guidelines and engaging certified local fire protection service providers.

Overview of CFP2800G

The CFP2800G is part of the LPCB-approved CFP series of fire alarm control panels, supporting multiple zones (2, 4, or 8) and conventional sounder circuits. It is fully compliant with EN54 Part 2 and Part 4 standards, ensuring reliable fire detection and power supply management. The panel includes auxiliary inputs/outputs, fault outputs, and optional features like zone delay and repeater connections, making it suitable for commercial and residential applications.

Installation Requirements

- **Qualified Personnel:** Installation must be performed by a technically competent and skilled engineer familiar with fire alarm systems.
- **Mounting:** The panel should be securely fixed to a wall using the provided base, ensuring proper clearance for wiring and maintenance access.
- **Electrical Connections:** Connect mains power according to the manual, ensuring the panel is properly earthed. Auxiliary circuits, detector loops, and sounder circuits must follow the specified cable types and limitations.
- **Programming and Testing:** Configure zone delays, test conditions, and user access levels. Complete the user manual/log book sections before system handover.
- **Compliance:** Follow NFPA, BSI, and European standards for fire alarm and suppression systems, which are recognized in Pakistan for safety compliance
