

Ireland Metal Cable Tray Dimensions

Article Overview

Metal cable trays in Ireland are available in standardized widths, depths, and lengths, with customization options to meet specific load and installation requirements.

Standard Dimensions

Metal cable trays are typically defined by four key measurements: width, depth, length, and material thickness. Standard widths commonly range from 50 mm to 600 mm, while depths vary from 25 mm to 150 mm, depending on the tray type and load requirements. Standard tray lengths are usually 2 meters or 3 meters, with some suppliers offering custom lengths to fit specific installations. Material thickness for steel trays generally ranges from 1.2 mm to 2.5 mm, ensuring structural integrity for heavy cable loads.

Tray Types and Dimension Considerations

- Ladder Trays: Prioritize width and side rail height to support heavy cables and allow airflow for heat dissipation. Side rail heights typically range from 50 mm to 100 mm.
- Perforated Trays: Offer ventilation while maintaining cable containment. Depths are usually shallower, around 25 mm to 75 mm, suitable for medium loads.
- Channel Trays: Compact and light-duty, often used for small cable runs. Widths are narrower, typically 50 mm to 150 mm.
- Wire Mesh Trays: Flexible and fast to install, with widths from 100 mm to 600 mm and depths around 50 mm to 100 mm, trading structural capacity for adaptability.
