

Lc fiber optic connector

Article Overview

The LC (Lucent Connector) is a small form factor fiber optic connector designed for high-density, high-performance network applications.

Overview

The LC connector was developed by Lucent Technologies to meet the need for a compact, low-loss connector suitable for telecommunications environments, and it has become a standard in high-speed networks (EIA/TIA-604-10) and data centers . Its name can also stand for Little Connector or Local Connector, and it features a 1.25mm ceramic ferrule, which is smaller than the traditional SC connector ferrule .

Key Features and Advantages

- Small form factor (SFF): Half the size of SC connectors, allowing double the fiber density in racks and panels .
- Push-and-latch design: Provides secure, pull-proof connections and easy engagement/disengagement .
- Polarized and anti-snag: Maintains correct signal direction and reduces accidental disconnections .
- Cost-effective and time-saving: Pre-terminated LC connectors reduce installation time and system costs .
- High performance: Suitable for gigabit and higher-speed networks, with low insertion loss and high repeatability .
