

Outdoor Thickened Three-Level Distribution Box

Article Overview

An Outdoor Thickened Three-Level Distribution Box is a robust, weatherproof electrical enclosure designed for safe, organized, and efficient outdoor power distribution across multiple circuits.

Key Features

Thickened and Widened Enclosure: The box features a reinforced, thickened structure that provides extra space for wiring, reducing crowding and simplifying installation and maintenance tasks. This design ensures durability against physical impacts and environmental stress.

Three-Level Configuration: Multi-level or tiered layouts allow separation of circuits or functional modules, improving organization, safety, and accessibility for technicians.

Weatherproof and Corrosion-Resistant: Most outdoor distribution boxes are rated IP65, offering protection against dust, rain, and moisture. Materials include corrosion-resistant sheet metal, fiberglass, or ABS plastic, ensuring long-term reliability in harsh outdoor conditions.

Safety Features: Integrated circuit breakers, leakage protection, and arc-proof designs enhance operational safety, preventing overloads and electrical accidents. Plastic screws and innovative knockout designs improve waterproofing and simplify cable entry without damaging the enclosure.

Customization Options: Voltage ratings, connector types, and internal components can be tailored to project requirements. Boxes can accommodate medium or low voltage systems, with options for vacuum switches, fuses, and fault interrupters. Custom configurations are available for limited spaces or specific industrial applications.

Applications: These boxes are suitable for construction sites,...
