

Price of custom-made electrical distribution box shielding

Article Overview

Custom-made electrical distribution box shielding typically ranges from \$150 to over \$1,000 per unit, depending on size, material, shielding effectiveness, and customization requirements.

Factors Affecting Price

Material: Common materials include stainless steel, aluminum, zinc-plated steel, and specialty alloys like MuMetal. Stainless steel and MuMetal offer superior durability and high-frequency shielding but are more expensive, while aluminum is lighter and less costly but provides moderate EMI/RFI protection . **Size and Configuration:** Wall-mounted, floor-standing, or desktop enclosures vary in cost. Larger or complex enclosures with multiple compartments, busbar fitments, or cable entry modifications increase the price . **Shielding Effectiveness:** The level of EMI/RFI attenuation (measured in dB) directly impacts cost. High-performance shielding (80-100+ dB) requires thicker materials, specialized gaskets, and precise construction . **Customization and OEM Features:** Custom branding, internal layouts, feedthrough ports (SMA, USB, RJ45), and integration with monitoring systems add to the cost. Custom orders generally take longer to produce and are priced higher than standard stock units . **Environmental Protection:** Ingress protection (IP) ratings for dust and water resistance, thermal management, and corrosion resistance influence pricing. Outdoor-rated or weatherproof enclosures are more expensive than indoor-rated units
