

Recommended Waterproof Galvanized Cable Trays in Vanuatu

Article Overview

For outdoor or high-moisture environments in Vanuatu, hot-dip galvanized (HDG) cable trays are recommended for their superior corrosion resistance and long-term durability.

Types of Galvanized Cable Trays

Hot-Dip Galvanized (HDG) Steel Trays

- Fully coated in molten zinc, covering all edges, holes, and corners.
- Coating thickness ranges from 65 to 85 microns, providing resistance to rain, salt air, and humidity for over 20 years .
- Ideal for outdoor, coastal, or industrial environments where moisture and corrosion are concerns. Pre-Galvanized (PG) Steel Trays
- Zinc-coated sheets with thinner coatings (12-20 microns).
- Suitable for dry indoor environments like offices or clean factories.
- Not recommended for outdoor or high-humidity areas due to faster rusting . GI Perforated and Ladder-Type Trays
- Perforated trays allow better heat dissipation and are lightweight, while ladder-type trays provide high load-bearing capacity for heavy cables .
- Semi-sealed or covered designs enhance dustproofing and water resistance.
