

Replacing the optical distribution box

Article Overview

Replacing an optical distribution box involves safely removing the old box, carefully handling fiber optic cables, and installing the new box with proper routing and secure connections.

Step 1: Preparation and Safety

Before starting, ensure you have the necessary tools: screwdrivers, cable ties, grommets, cleaning tissues, and protective gloves. Turn off or isolate the fiber network to prevent signal loss or damage. Identify the existing ODB, its connections, and the fiber splitter locations to avoid disrupting service .

Step 2: Remove the Existing ODB

- Document the connections: Label all incoming and outgoing fibers to maintain correct routing.
- Disconnect patch cords and pigtails carefully to avoid bending or breaking fibers.
- Unscrew or unbolt the ODB from its mounting rack or wall bracket. It is recommended that two people handle the removal for safety and stability .
- Gently remove the box while ensuring fibers are not under tension or twisted.

Step 3: Prepare the New ODB

- Inspect the new box for any damage and ensure it matches the required splitter configuration (e.g., 1x2, 1x4, 1x8) .
- Install mounting brackets if necessary and fix the box to the rack or wall in the correct orientation .
- Prepare cable entry points using grommets or seals to protect fibers from sharp e...
