

Russian AI joins the server

Overview

On December 27, Russian server supplier Graviton announced its first AI and high-performance computing HPC server, the Graviton S2124B, powered by a domestically developed processor. The new AI and HPC is designed to handle complex AI and supercomputing workloads with support for up to eight. In an unprecedented development in election interference tactics, Russian operatives constructed a dedicated artificial intelligence server on Moscow soil to avoid international oversight, according to U. Treasury Department sanctions announced December 31. The technical infrastructure, housed in. The US Treasury Department unveiled sanctions on December 31, exposing a sophisticated operation involving a dedicated AI server built on Russian soil, specifically designed to evade international scrutiny and generate disinformation at an unprecedented scale. This isn't just a theoretical threat.
