

Suriname fiber optic communication

Article Overview

Suriname has rapidly expanded its fiber optic network, with urban coverage reaching 45% by 2026 and international connectivity strengthened through multiple submarine cable systems.

National Fiber Optic Infrastructure

Suriname's fiber optic network has seen significant growth, particularly in urban areas where coverage reached 45% by 2026, supporting average internet speeds of 65 Mbps and facilitating digital adoption for businesses and households . Telesur initiated fiber rollout in Paramaribo in 2013 and completed a National Broadband Project by 2019, offering residential plans ranging from 50/50 Mbps to 200/200 Mbps . Despite this progress, there remains a sharp urban-rural divide, with only about 27% of interior residents online, reflecting limited infrastructure and connectivity in remote areas .

International Connectivity

Suriname is connected internationally through several submarine fiber optic systems. The Suriname-Guyana Submarine Cable System (SGSCS) links Suriname with Trinidad and Guyana, while the Americas II cable connects the country to the United States, Puerto Rico, the U.S. Virgin Islands, Martinique, Curaçao, Trinidad, Venezuela, and Brazil . In August 2024, the Deep Blue One subsea fiber optic system went live, delivering 25 Tbps over a 2,250 km route linking French Guiana, Suriname, Guyana, and Trinidad & Tobago . More recently, Suriname joined the EllaLink Caribbean Gateway, providing a fully diverse subsea route to Europe, Brazil, and the USA, enh...
