

The fiber optic box at the home is lit up with a red light

Overview

If there is a red light in the second slot, noted by the "" symbol or "Optical", this could mean there is a fiber issue. The Optical Network Terminal (ONT) is a crucial device in modern telecommunications, serving as the interface between your home network and the fiber-optic internet connection provided by your Internet Service Provider (ISP). One of the key aspects of the ONT is the array of lights on its front. If there are no lights, please check the unit for power by examining both ends of the power cable, ensuring the cables are plugged in, and the power button is pushed in rather than popped out. You may also need to verify that the outlet is receiving power. Solid Green: The ONT is powered on and functioning normally. Don't freak out just yet! In this article, we'll dive deep into why that fiber internet box red light might be. The Fibre Connection Box on your wall (the engineers will call this the Optical Network Terminator or ONT) is where the Fibre comes into your home. The lights on your Fibre Connection Box let you know when everything's working as it should be and can tell you what's wrong if you're having problems. Power down for 15mins then power back on and wait 3mins for the lights to settle Power connector has come loose.
