

The information distribution box is a low-voltage electrical box

Overview

A low voltage distribution box handles electrical power up to 1,000 volts AC. It safely divides a main power supply into smaller, protected circuits that feed everything from production machinery to building services. It is often placed in buildings, factories and even power stations.) to various electrical. A low-voltage box is a specialized enclosure designed to protect and organize electrical connections for devices operating at 50 volts or less, commonly used in both residential and commercial settings for applications such as audio/video equipment, networking, security systems, and lighting. The distribution box is a low-voltage distribution device composed of switchgear, measuring instruments, protective appliances and auxiliary equipment assembled in closed or semi closed metal cabinets or panels according to the electrical wiring requirements.
