

What is the GB standard for cable trays

Overview

The thickness standard for galvanized (steel) Cable Trays is based on GB/T 14540-2020 "Cable Trays" (the latest national standard) and JB/T 10216-2013 "Cable Trays for Electrical Control and Distribution" (industry standard). The minimum substrate thickness (excluding galvanized layer) is. There is no single global standard for cable tray systems. In practice, the applicable standard depends on three factors: In most international projects, product standards and installation standards are not the same: If you only follow one of them, the system may not pass approval. This document, based on national standards such as GB 50303 "Code for Acceptance of. What is BS EN 61537 - Cable management about?

BS EN 61537 specifies requirements and tests for cable tray systems and cable ladder systems intended for the support and accommodation of cables and possibly other electrical equipment in electrical and/or communication systems installations. 8 (Other Mechanical Stresses (AJ)) in that document provides requirements for cable support.
